Renewable Energy

Renewable energy is natural energy that comes from our Earth. It can come from sunlight, rain, thermal energy, and even from the wind! These sources of energy are renewable and are easily replenished. Replenished means to fill up again. These sources can produce clean electricity, hot water, heating, and power many everyday items. The coolest part of renewable energy is that it can produce power without adding pollutants that are harmful to our planet!

Directions: Remember what you have read and answer each question about this topic.

Match:

1. renewable energy	●	●	to refill
2. replenish	●	●	natural energy from our Earth

Choose the best answer:

3. Renewable energy can add pollution to the Earth.

true false

4. Where does renewable energy come from? Give two examples of renewable energy.
